

REPORT
2018 Registered Managers
Forum

Introduction

The fourth annual Registered Managers Forum was held on 17 August 2018. This is a key event for the Department of Mines, Industry Regulation and Safety (DMIRS) to network with resources industry management, channel information, and hear the point of view of decision-makers in industry.

Nearly a hundred managers, including registered managers, quarry managers, underground managers and alternatives attended the forum.

The main theme of the forum was competency and training for the Western Australian mining sector.

Forum format

The forum was divided into two sessions – information giving and a workshop.

Information giving

The forum opened with a welcome from facilitator, Andrew Chaplyn, State mining engineer.

Mines and Petroleum Minister, William (Bill) Johnston and Acting Deputy Director General, Ian Munns provided an overview of safety, including the government and Department’s commitments. Following their speeches, there was a question and answer (Q&A) session facilitated by Inspector of Mines Amy Douglas-Martens with panel members Minister Johnston, Mr Munns and Mr Chaplyn.

After the Q&A, Mr Chaplyn spoke about the Department’s *Towards 2020* commitments and the new WHS Act, participants were also asked to contribute their thoughts to the question “why aren’t we improving”.

Prior to lunch there were updates on health and hygiene management plans and the Safety Regulation System (SRS) from Craig Little, Team Leader Inspector of Mines.

General Manager Investigations, Colin Boothroyd, finished the morning’s presentations with an update on investigation services.

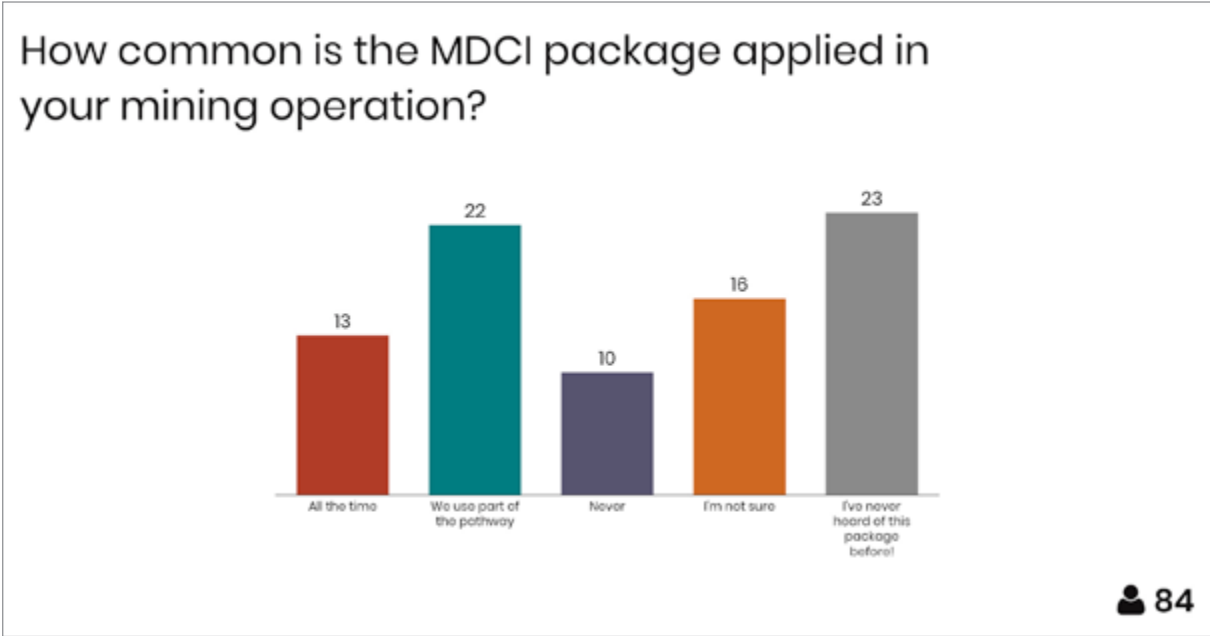

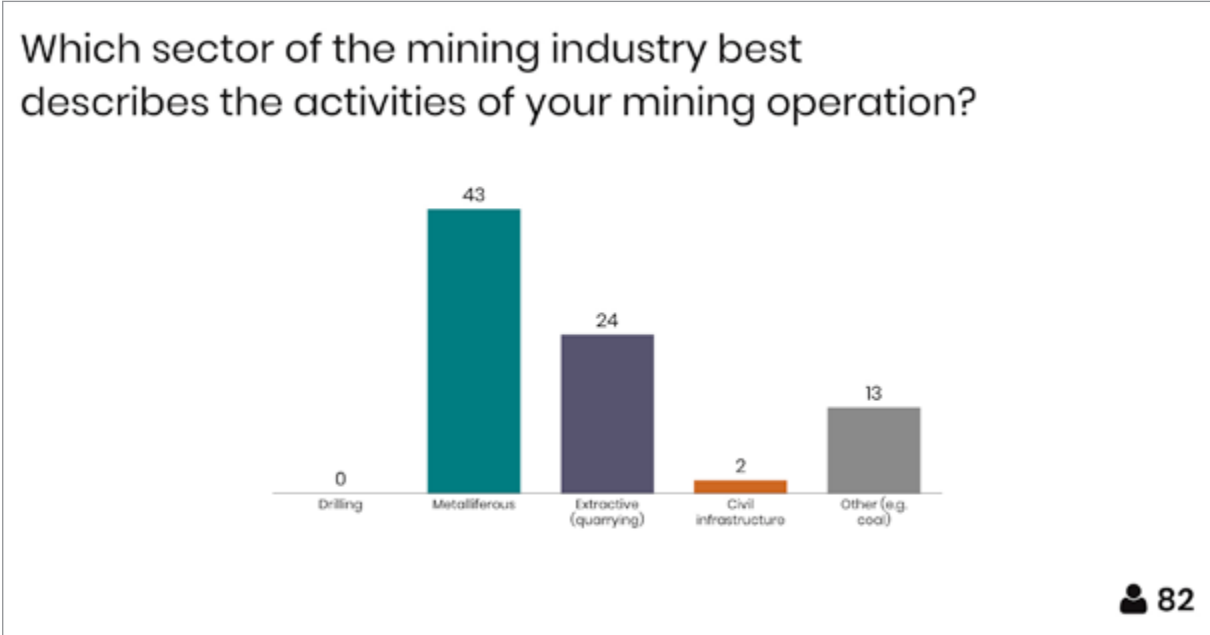

After lunch, Regional Inspector, Martin Ralph and Team Leader Inspector of Mines, Waeel Ilahi conducted a workshop on competency and training for the Western Australian mining sector.

The forum concluded with an update on the Mines Safety Roadshow from Ms Douglas-Martens and closing remarks from Mr Chaplyn.

Workshop

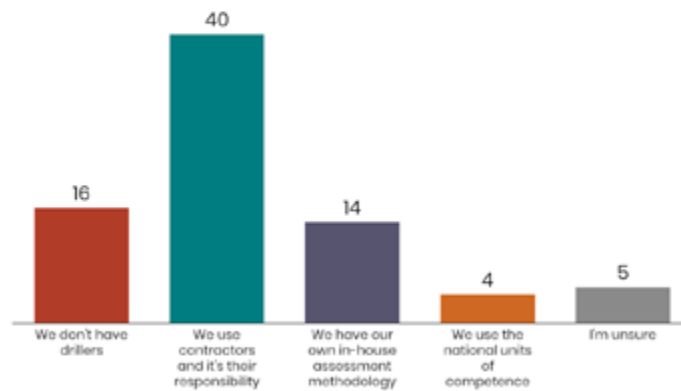

Participants were asked to provide feedback through a live polling system. The live polling components captured participants' views on competency and training.

The discussion points referred to:

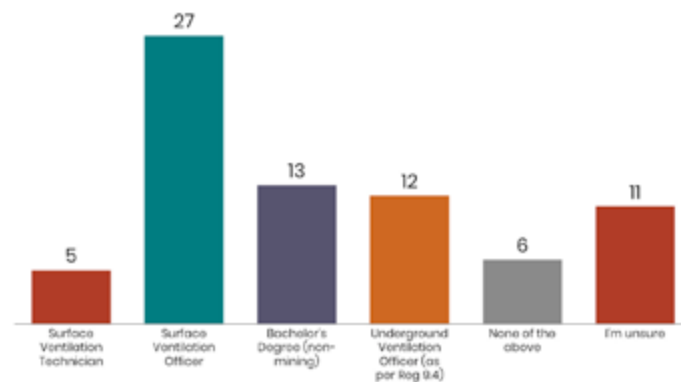

Note: MDCI is the acronym for mining, drilling and civil infrastructure

How are you currently assessing the competence of drilling workers engaged on your mining operations?

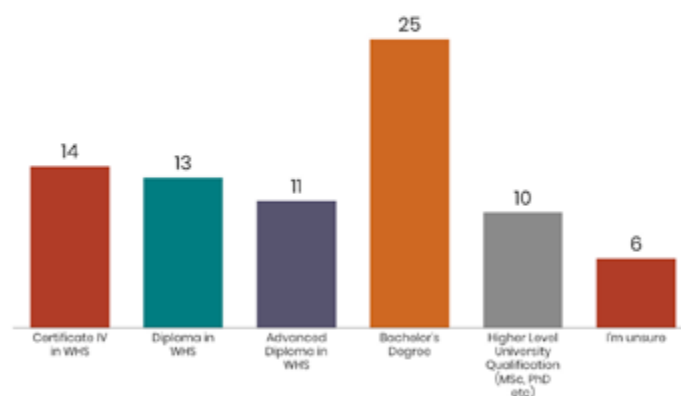

79

What is the highest level of competency held by your ventilation personnel for your mining operation?

74

What is the highest level of competency held by your workplace safety personnel for your mining operation?

79

Event survey responses

The majority of attendees at the forum believed it was a good opportunity to network with DMIRS staff and industry. Overall, 34% attended a previous Registered Managers Forum and 96% would probably participate in 2019.

The participants were primarily registered managers of mine sites.

Conclusions

The forum continues to be an effective way to engage with industry. The event provided a rare opportunity for managers to come together to network and discuss safety issues of common concern.

Recommendations

Registered Managers want non-official lines of communication with DMIRS, achieved through:

- Roadshows and events
- Toolbox discussions
- Safety videos
- Webinars
- Workshops on site
- Site leadership teams
- Face-to-face meetings
- Registered Manager training
- Forums
- Engagement with site management at site visits.

Appendix 1 Presentation slides

Setting the scene

Andrew Chaplyn
State mining engineer

Department of Mines, Industry Regulation and Safety | www.dmirns.wa.gov.au

1

Towards 2020 – goals

World-leading regulation

Collaborative and partnering
Innovative systems
Competency and training

Smarter systems

Digital platforms
Data driven decisions
Rational and integrated use of resources

Well-informed industry

Lessons shared
Evidence provided
Collective learning opportunities

Department of Mines, Industry Regulation and Safety | www.dmirns.wa.gov.au

2

Towards 2020 – our commitments

Department of Mines, Industry Regulation and Safety | www.dmirns.wa.gov.au

3

The (new) WHS Act

A single Act for WHS

Department of Mines, Industry Regulation and Safety | www.dmirns.wa.gov.au

4

The (new) WHS Act

- The Ministerial Advisory Panel (MAP) has completed its review of the Model WHS Act, and provided its recommendations to Minister.
- The next stage of the process will be a two-month public consultation period, which was recently announced by the Minister shortly.
- The Department is running a series of information sessions to support the call for public comment.

Department of Mines, Industry Regulation and Safety | www.dmirns.wa.gov.au

5

The (new) WHS Act: Highly recommended

<https://vimeo.com/user322862/review/280294023/9580441cf>

Department of Mines, Industry Regulation and Safety | www.dmirns.wa.gov.au

6

The (new) WHS Act and Regulations

A single Act for WHS - proposed structure

Department of Mines, Industry Regulation and Safety | www.dmirns.wa.gov.au

7

A typical week for the regulator

Monday	Tuesday	Wednesday	Thursday	Friday	Weekend
 Review of published work's data	 Production still suspended	 Underground for emergency in progress	 Media queries	 Injury incident	 Medical updates
37 Inspection completed	62 New cases opened	11 persons in-charge change for re-inspection	Due to ongoing repairs after significant incident at a large open pit mine in Lake	Worker struck by equipment on the mine underground	Changing abilities of worker to conduct in-charge
36 Inspection completed	3 Inspection completed	Approved two project management plans	Checked awareness		

Department of Mines, Industry Regulation and Safety | www.dmirns.wa.gov.au

8

Safety regulator expectations of industry

To work with industry to reduce serious accidents and incidents, and to provide tangible support in achieving a positive cultural change.

Risk-based approach that places the onus on operators to demonstrate:

1. an understanding of the hazards and risks of their workplace
2. they are operating as safely as possible.

Department of Mines, Industry Regulation and Safety | www.dmir.wa.gov.au

9

Hazard registers

Available at www.dmir.wa.gov.au

Department of Mines, Industry Regulation and Safety | www.dmir.wa.gov.au

10

Fatalities: What is the data telling us?

Why are we not improving?

Department of Mines, Industry Regulation and Safety | www.dmir.wa.gov.au

11

Serious injuries: What is the data telling us?

Why are we not improving?

Department of Mines, Industry Regulation and Safety | www.dmir.wa.gov.au

12

Serious injuries: A closer look

Why are we not improving?

Department of Mines, Industry Regulation and Safety | www.dmir.wa.gov.au

13

Working near open holes – information available

Department of Mines, Industry Regulation and Safety | www.dmir.wa.gov.au

14

Safety regulator expectations of industry

Department of Mines, Industry Regulation and Safety | www.dmir.wa.gov.au

15

Risk management – hierarchy of control

Department of Mines, Industry Regulation and Safety | www.dmir.wa.gov.au

16

Are you in control?

Department of Mines, Industry Regulation and Safety | www.dmir.wa.gov.au

17

Update on health and hygiene management plans (HHMP) and Safety Regulation System (SRS)

Craig Little
Acting Regional Inspector of Mines

Department of Mines, Industry Regulation and Safety | www.dmir.wa.gov.au

18

Why a HHMP?

- All workplaces have some form of chemical, biological, radiation or physical hazard that include:
 - Dusts, chemicals, noise, vibration, radioactive materials or devices, temperature extremes, bacteria, fungi, inadequate lighting
- Meets legislative requirement to:
 - Identify hazards
 - Assess risks
 - Implement Controls
 - Verify that controls are effective
- Provides a structured means of demonstrating an understanding of the hazards and risks at a mine site and verification that controls are effective.

19

Department of Mines, Industry Regulation and Safety | www.dmirns.wa.gov.au

When is a HHMP required?

- All registered mine sites require a HHMP (including exploration)
- Prior to operations commencing (i.e. hazards are identified and controls must be implemented prior to operations starting)
- Whenever a change occurs that alters risk profile
- An annual summary report if risk profile or controls not significantly different
- A five yearly formal and comprehensive report
- Very small operations may be exempt e.g. those exempt from requiring a Ventilation Officer and hazard management requirements are covered in Project Management Plans (PMP).

20

Department of Mines, Industry Regulation and Safety | www.dmirns.wa.gov.au

What should be included in HHMP

- Principal function e.g. exploration, quarry, process plant
- Status of operation e.g. new, reopening of suspended activities, expansion of existing facilities, continuation of normal operations
- Location, activities at site (a schematic flowchart may assist), techniques and controls, size of operation
- Basic geology e.g. principle mineral(s), contaminants in ore and waste, likelihood of harmful or flammable gases, chemically unstable minerals
- Process chemicals used or created
- Temperature and pressure of processing.

21

Department of Mines, Industry Regulation and Safety | www.dmirns.wa.gov.au

What should be included in HHMP

- Identify during
 - Exploration
 - Mining
 - Processing and stockpiling
 - Ancillary / support services
- Identify engineering, administrative and PPE controls
- Document hazards and controls.

22

Department of Mines, Industry Regulation and Safety | www.dmirns.wa.gov.au

What should be included in HHMP

- Define parameters used to assess risk and risk acceptability
- Can use corporate method or AS/ISO 31000
- Define Similar Exposure Groups (SEGs)
- Risk assess each SEG for the hazards
- Document risk assessment with controls in place.

23

Department of Mines, Industry Regulation and Safety | www.dmirns.wa.gov.au

What should be included in HHMP

- Includes
 - Atmospheric sampling
 - Biological monitoring
 - Noise dosimetry
 - Audiometric testing
 - Medical examinations
 - Ventilation system measurements e.g. capture velocities
 - Audits, inspections, questionnaires and examinations
- Record results and findings
- Submit results and summary to DMIRS via SRS or Workcover as applicable
- Conduct (statistical) analysis of results.

24

Department of Mines, Industry Regulation and Safety | www.dmirns.wa.gov.au

What should be included in HHMP

- Confirm and document controls that are effective
- Identify what additional controls are required
- Summarise and present in annual report.

25

Department of Mines, Industry Regulation and Safety | www.dmirns.wa.gov.au

Who has a role in HHMP development?

- Registered Manager
 - Responsible for and controls organisation to full compliance with it
- Ventilation Officer
 - Collects information, manages production, ensures accuracy and is satisfied that methods and controls adequate
- Ventilation Technician
 - ensure samples collected in accordance with approved methods, submitted correctly and highlights anomalies
- Noise Officer
 - Collects information, ensures accuracy and is satisfied that methods and controls adequate
- Geologists, Area Superintendents, Lab Manager, Village Manager, others
 - provide accurate and timely information about hazards and controls

26

Department of Mines, Industry Regulation and Safety | www.dmirns.wa.gov.au

HHMP submission and administration

- HHMPs will be submitted and administered via SRS
- Planned roll out for submission of HHMP Oct 2018
- Planned roll out of live HHMP (update and maintain) Q1 2019
 - Stats package
 - Interpretation of data
 - Compliance status (traffic lights) of monitoring (to the exposure standard)
 - Any red, site is red, can drill down and work out SEG that is red and focus effort at highest risk areas.

27

Department of Mines, Industry Regulation and Safety | www.dmirns.wa.gov.au

28

Department of Mines, Industry Regulation and Safety | www.dmirns.wa.gov.au

Department of Mines, Industry Regulation and Safety | www.dmirns.wa.gov.au

29

Department of Mines, Industry Regulation and Safety | www.dmirns.wa.gov.au

30

Department of Mines, Industry Regulation and Safety | www.dmirns.wa.gov.au

31

Department of Mines, Industry Regulation and Safety | www.dmirns.wa.gov.au

32

HHMP trial

- Positive feedback from mines and consultants
- Trialled with medium and large companies
- Trialled with consultants to small, medium and large mines
- Trialled with select group of inspectors and other Department officers with feedback indicating it is intuitive and user friendly.

Department of Mines, Industry Regulation and Safety | www.dmirns.wa.gov.au

33

Key points

- HHMP is an integrated risk-based management plan not just a monitoring program
- It supports the PMP by providing more detail on specific hazards
- It complements the RMP, Noise Control Plan and other hazard management plans
- Current RBHMP are valid until the review time.

Department of Mines, Industry Regulation and Safety | www.dmirns.wa.gov.au

34

Exceedance management

- Recognise that PPE and administrative controls are used when higher order controls are not practicable, if organisation are robustly using these controls then the exceedances are triaged
- Guidance via template for incident investigation (PEEPO).

	Q1 January – March 2018	Q2 April – June 2018
Atmospheric	7,869 (125 – 1.6% exceed)	3,269 (61 – 1.9% exceed)
Noise	2,438 (1,372 – 56% exceed)	3,650 (961 – 26% exceed)
Biological monitoring	643 (13 – 2% exceed)	1,145 (8 – 0.7% exceed)

Department of Mines, Industry Regulation and Safety | www.dmirns.wa.gov.au

35

SRS reporting for industry

- Provide reporting function in SRS to allow an overview of operational performance
- Benchmarking across commodity.

Department of Mines, Industry Regulation and Safety | www.dmirns.wa.gov.au

36

Department of Mines, Industry Regulation and Safety | www.dmirns.wa.gov.au

37

Department of Mines, Industry Regulation and Safety | www.dmirns.wa.gov.au

38

SRS reporting for industry

- Planned roll out Q1 2019
- Will only be able to access for site where you have security
- Commodity data will sanitised.

Responding to natural deaths at WA mines (2012 - 2017)

Colin Boothroyd
General Manager Investigations

Factors considered

- Age of worker
- Date and time of event
- Death related to known existing medical condition: Yes/No
- Results from post mortem
- Onset of fatal episode witnessed: Yes/No
- Initial response to incident on/off site
- Death on/off site
- Area of mine where fatal event occurred
- Roster cycle, shift and hours of work
- Occupation group

Cause of death

Heart disease including Coronary Thrombosis/ CAA/ CA/ IHD/ Aortic and heart surgery	27
Cerebral Haemorrhage / Stroke	3
Deaths with multi organ failure	2
Diabetes mellitus	2
Edema (TBC)	1
Seizure	1
Pulmonary thromboembolism (blood clot in the lungs)	1
Acute intoxication of chronic obstructive pulmonary disease	1
Delayed Atherosclerotic Aneurysm	1
Acute drug toxicity (cocaine)	1
Unascertained natural cause	5
Total	45

Age group and cause of death

Occupation group and cause of death

Area where fatal event occurred and emergency response

Knowledge of pre-existing medical conditions

Recommendations

- Confirm fitness for work
- Plan and resource effectively
- Implement protocols to respond to unexpected deaths
- Continue reporting all deaths to the Department

Revision of National Competencies relevant to the WA mining industry

Martin Ralph
Regional Inspector Mines Safety

Waeel Ilahi
Acting Regional Inspector Mines Safety

Content

- Why do we care about "competency"?
- National Competencies
- Industry Reference Committees (IRCs)
 - Drilling
 - Extractive
 - Metalliferous
- IRC common projects
 - WHS Working Group
- Verification of Competencies (VOCs)

Department of Mines, Industry Regulation and Safety | www.dmir.wa.gov.au

49

Legislation

MSIA 9(1) (b)

9. An employer must, so far as is practicable ...

b) Provide such information, instructions, training and supervision of employees as is necessary to enable them to perform their work in such a manner that they are not exposed to hazards ...

Department of Mines, Industry Regulation and Safety | www.dmir.wa.gov.au

50

Legislation

MSIR 4:13 (1) (b)

4.13. Induction and training of employees

(1) Each responsible person at a mine must ensure that every employee is:

b. assessed before commencing work at the mine to ensure that the employee is competent to perform the tasks he or she will be assigned and to operate any plant and equipment the employee will be required to operate

Department of Mines, Industry Regulation and Safety | www.dmir.wa.gov.au

51

Why review the National Competencies?

To ensure students continue to learn work ready skills that meet industry needs

- This is performed by the Vocational Education and Training (VET) sector
- The aim is to adequately prepare students in various jobs
- The VET sector is key to ensuring that Australia remains globally competitive
- Skills identified by businesses and industries that are needed to be productive and internationally competitive.

Department of Mines, Industry Regulation and Safety | www.dmir.wa.gov.au

52

National Competencies: VET System

VET system is based on:

- occupational skills standards set out in units of competency (UoC's); and
- packaged into nationally consistent qualifications;
- that reflect the skills and knowledge required to successfully operate in a particular occupation.

Department of Mines, Industry Regulation and Safety | www.dmir.wa.gov.au

53

National Competencies: VET objectives

- Efficiencies gains for employers in recruitment and selection
- Assurance that an individual's qualification or statement of attainment means they have:
 - the core competencies required by industry,
 - regardless of the training provider,
 - able to be enhanced by organisation-specific professional development as needed by the employer
- Competitive edge for individuals in the job market with:
 - nationally recognised qualifications; or
 - statements of attainment.

Department of Mines, Industry Regulation and Safety | www.dmir.wa.gov.au

54

MDCI Sector

The Mining, Drilling and Civil Infrastructure (MDCI) Sector:

- Australia's largest sector, employing approximately 370,000 nationally
- Nationally recognised training is housed within the Resources and Infrastructure Industry (RII) Training Package
 - Intent to provide a clear, structured pathway to support development of the MDCI workforce.

Department of Mines, Industry Regulation and Safety | www.dmir.wa.gov.au

55

MDCI sector – key trends

- Key trends impacting the MDCI sector:
 - Increased demand for workforce agility, and the ability to move between sectors and industries
 - Increased investment in the infrastructure industry from the Australian government, leading to increased demand for civil infrastructure skills
 - Emerging technology, impacting on ways of working
 - Increase safety focus to ensure the safety of workers
 - The need to support the development of managerial skills as workers progress into leadership roles.

Department of Mines, Industry Regulation and Safety | www.dmir.wa.gov.au

56

Employment and learner enrolments

NOTE: excludes all enrolments in Certificate I and II qualifications

Department of Mines, Industry Regulation and Safety | www.dmir.wa.gov.au

57

How the (new) VET Governance system works

Department of Mines, Industry Regulation and Safety | www.dmir.wa.gov.au

58

Industry Reference Committees

- Guided by the IRC Operating Framework
- Gather intelligence for training package development and review
- Oversight the development and review of:
 - training packages in line with AISC requirements
 - the IRC work plan, advising who to consult and the type of information to include
- Report, through SSO, to the AISC on progress of its work
- Promote the use of VET in the sectors they represent.

59

Department of Mines, Industry Regulation and Safety | www.dmirns.wa.gov.au

Metalliferous, Drilling and Extractive IRCs

- Formed from the previous SkillsDMC Industry Skills Council
- Tripartite representation:
 - Skills Support Organisation - PWC
- Required to review all UoC's within four years
 - AISC wish to reduce the number of UoC's
 - Reduce overlaps / repetition where possible
- Endorse Skill Sets wherever possible.

60

Department of Mines, Industry Regulation and Safety | www.dmirns.wa.gov.au

DMIRS and IRC's

- January 2017: DMIRS invited by AISC to contribute to three Mining, Drilling and Civil Infrastructure (MDCI) IRC's:
 - Drilling
 - Extractive
 - Metalliferous Mining
- May 2017: invited to contribute to a review of WHS qualifications in the Business Services Training Package
 - Project 1G

61

Department of Mines, Industry Regulation and Safety | www.dmirns.wa.gov.au

Training packages

- Consist of:
 - UoC's specifying standards of workplace performance
 - assessment requirements (for each UoC)
 - packaging rules for qualifications
- Do not prescribe how an individual should be trained
- RTO use training packages to design curriculum and/or assessment methods:
 - that assist individuals to gain and/or demonstrate they have acquired requisite skills and knowledge.

62

Department of Mines, Industry Regulation and Safety | www.dmirns.wa.gov.au

MDCI - RII 2015 Training package

Metaliferous Mining	Mining, Drilling and Civil Infrastructure (MDCI) - Extractive	Mining, Drilling and Civil Infrastructure (MDCI) - Metalliferous Mining	Deleted skills applicable to all units
Workforce Mining (MDCI11)	Risk Management (MDCI05)	Networks Operations (MDCI03)	Working Time (MDCI06)

RII Training package (Release 2.0) endorsed 1/12/2015

792 UoC's in the current RII package

63

Department of Mines, Industry Regulation and Safety | www.dmirns.wa.gov.au

MDCI and Cross-sector projects

Automation Skills
This includes automated processes and the use of robotics, drones and remote operations systems. There are an estimated 100 units in this category, limited only by demand.

Supply Chain Skills
Traditional supply chain management practices are evolving rapidly as the industry has recently been impacted by technology.

Big Data Skills
This includes data management, data analysis and data driven decision making, as well as the capture, storage and utilisation of this data.

Coding Skills
This includes digital manufacturing, 3D printing, and computer aided design, prototyping and modelling.

Customer Engagement
This includes customer engagement through social and mobile media. Key skills include virtual customer experience services and marketing.

Cyber Security
This includes information security, data protection and privacy, given the increasing need for security professionals.

Green Skills
This includes environmentally friendly products, manufacturing and waste processes, and sustainable energy production.

64

Department of Mines, Industry Regulation and Safety | www.dmirns.wa.gov.au

Drilling IRC - Sector overview

- Includes both onshore and offshore drilling in oil and gas, as well as drilling in mineral exploration, geothermal, water well, civil infrastructure and agriculture
- Multidisciplinary industry - shares core skills with other industries
- Large number of small employers (mostly contractors)
- Six large incumbents with over 200 employees each
- Currently a skills shortage to meet rising demand
- Future growth underpinned by major LNG projects.

65

Department of Mines, Industry Regulation and Safety | www.dmirns.wa.gov.au

Drilling IRC - Contentious issues

- UoCs related to off-shore drilling are not being utilised by industry - due to a preference to adopting international standards
- UoCs relating to out-dated drilling methods (e.g. Cable tool drilling) need to be deleted
- UoCs need to be created and/or updated to cater for technological factors (e.g. use of drones, remote operation etc)
- Drilling "mechanics" of different drilling methods are similar, however UoCs need to be updated to reflect these methods and technological advancements.

66

Department of Mines, Industry Regulation and Safety | www.dmirns.wa.gov.au

Extractive (Quarrying) IRC - Sector overview

- Focuses on extraction of raw materials used in building and construction
- Quarry sites are generally located close to major sites of building and construction (both mining and civil)
- Large proportion of small operators in the market
- Employment in this sector has remained steady from 2007
- Success of this sector is heavily dependant on the performance of the building and construction industries.

67

Department of Mines, Industry Regulation and Safety | www.dmirns.wa.gov.au

Extractive (Quarrying) IRC - Contentious issues

- Given the relatively small size of many extractive industries, the VOC process can be ad-hoc at best
 - Many sites don't have in-house training
 - New ways of demonstrating competencies with the use of technology?
- Lack of RTOs delivering the Diploma and Advanced Diploma of Surface Extraction Operations
 - Due to the lack of demand the IRC is considering deleting these qualifications.

68

Department of Mines, Industry Regulation and Safety | www.dmirns.wa.gov.au

Metalliferous IRC: Interesting fact

Outlook for the sector – major trends

Productivity Improvements

- Iron ore prices are expected to remain weak for the next five years, as supply increases without a corresponding increase in demand. This will increase competitive pressures on companies and the mining industry will attempt to cut costs and improve productivity.
- Fully automated trucks have already been in use in the Iron Ore region since the 1980s. However, much more automation will be required for workers to become proficient in more effective ways of working, and use of new technology.

Labour mobility

- Both mining and construction industries have above average labour mobility. Last year, 13.4% of workers in the mining industry had earned jobs within the last six months. This is significantly higher than the national average of 9%.
- According to the Productivity Commission, the majority of mineral-pulse jobs are for high 'skilled' occupations and are generally held in labour geographically labour mobility, especially in relation to regional development jobs.

Leadership and Management Skills

- Leadership and management is becoming increasingly important for the mining, drilling, and civil construction sector. These skills will be increasingly required given other trends of the sector, including emerging technology and increasing regulation.

Department of Mines, Industry Regulation and Safety | www.dmirns.wa.gov.au

69

Metalliferous IRC: Pre-existing projects

2017 Projects for Training, Review and Development

- Drifts Management Project**
This involves drilling the Drifts (the surface that is to be used for mining) and adding mineral conditions for assessment.
- Blasting Project**
This project requires change in performance criteria of several units and an updating of the assessment instrument portion.
- Spine Filling Project**
Currently there is a high duplication between R12 and R15 units for Spine Filling. This project involves updating current R12 units with R15 where appropriate and developing a new unit covering spine filling to the resource sector.
- Emerging Response Project**
The development work for this project includes reviewing engagement between development officers and assessors, simplifying current unit structures.
- Mobile Plant Operation and Research Training Project**
There are units of the same title and with in the R12 training package, and require the same competencies. Development work is being completed to streamline these units.

Plus a "special" project on Supervision

Department of Mines, Industry Regulation and Safety | www.dmirns.wa.gov.au

70

Metalliferous IRC: MDCI survey responses

- Common Skills:**
 - 66% said WHS was the most important skill for workers;
 - 40% said this needs to be improved ...
- Emergency Response and Rescue:**
 - Only 46% said ERR training effectively catered to needs.

MDCI Meeting Pre-reading (April 2018, Page 15)

Department of Mines, Industry Regulation and Safety | www.dmirns.wa.gov.au

71

Metalliferous IRC: Major project timeline

Timeline for IRC Involvement in the next 3 months

The timeline below provides an overview of IRC involvement in three projects for the next three months until the end of April.

Department of Mines, Industry Regulation and Safety | www.dmirns.wa.gov.au

72

Contentious issues

- Lack of clarity exists around the distinction between:
 - UoC's relating to high risk work; and
 - granting a licence to perform them, which is required to comply with Model WHS laws
- 75 UoC's possibly duplicate High Risk Work License competencies in Construction package:
 - e.g. CPCCLDG3001A - Licence to perform dogging versus RIIHAN208D - Perform dogging;
 - Case for removal failed to gain support.

Department of Mines, Industry Regulation and Safety | www.dmirns.wa.gov.au

73

Contentious issues

- Supervision project case for change:
 - Failed to attract support due to lack of consultation
- Harmonising experience for assessors:
 - Three years for Drilling, Coal and Extractive;
 - Five years for Metalliferous and Civil Construction;
 - Likely to be three years, but experience **must be current**.

Department of Mines, Industry Regulation and Safety | www.dmirns.wa.gov.au

74

Metalliferous IRC: New projects

- Skill sets for the following roles will be created to meet the needs of industry to train people:
 - Surface ventilation technicians;
 - Underground ventilation technicians; and
 - Surface ventilation officers

MDCI Industry Skills Forecast and Proposed Schedule of Work (July 2018, Page 30)

- Skill sets will be comprised of the listed units:
 - We will review the content of these units to ensure they are updated to meet the needs of industry stakeholders.

Department of Mines, Industry Regulation and Safety | www.dmirns.wa.gov.au

75

New projects: Surface ventilation technician

UoC	Title
RIEGS301D	Operate and maintain instruments and field equipment
RIENV301D	Conduct atmospheric monitoring
RISTD302D	Process data and maintain accurate records
RIICM201D	Carry out measurements and calculations

Department of Mines, Industry Regulation and Safety | www.dmirns.wa.gov.au

76

New projects: Underground ventilation technician

UoC	Title
Same units as Surface Ventilation Technician, with the addition of:	
RIMSM307	Install and maintain ventilation systems and equipment
	<ul style="list-style-type: none"> • currently in the Small Mining project; • the "install" component is likely to be reduced or removed.

Department of Mines, Industry Regulation and Safety | www.dmirns.wa.gov.au

77

New projects: Surface ventilation officer

UoC	Title
	Implement and monitor health and hygiene management systems
RIIWH5404D	<ul style="list-style-type: none"> • included in the Exploration Project to review
	Assist with workplace monitoring processes
B5BWH5409	<ul style="list-style-type: none"> • currently under review by WHS working group; • will import the unit from the B5B package; • will align with the revised DMIRS H-MP strategy

Department of Mines, Industry Regulation and Safety | www.dmirns.wa.gov.au

78

Metalliferous IRC: Key driver - WHS

- Key driver – to align with the WHS Body of Knowledge
- Industry consultation identified deficiencies:
 - Conditions of assessment
 - poorly defined;
 - Required knowledge and skills
 - inconsistent and inappropriate;
 - Qualification packaging
 - allowing minimal WHS content in qualifications
- Conclusion: the Qualifications are not "fit for purpose"

WHS working group: Participant feedback

WHS statistic

WHS working group: Project 1G

WHS enrollment data

Qualification	Unit	2016 Enrolments	2017 Enrolments	2018 with enrolment
Work Health and Safety				
Certificate IV in Work Health and Safety	BSBWHS401	44	126	44
Diploma of Work Health and Safety	BSBWHS402	141	127	44
Advanced Diploma of Work Health and Safety	BSBWHS403	141	127	44

WHS working group: Stakeholder feedback

Who have we talked to?

WHS working group: Response

Proposed changes

WHS working group: Progress to date

- Certificate III and Advanced Diploma have been retained
- Duplication or overlaps within qualifications reduced:
 - 503 and 504 (risk management) have been combined
- Emergency Response units re-aligned:
 - PUAWER001B removed from Certificate III
- Descriptors aligned with AQF accountabilities:
 - Certificate IV:
 - "Contribute to implementing and maintaining"
 - Diploma:
 - "Manage" or "Develop"

WHS working group: Contentious issues

- Packaging rules do not align with similar qualifications:
 - 10 UoC's for Certificate IV and 11 for Diploma;
 - 14 or 15 common for other qualifications.
- Volume of learning
- Safe systems of work v safety management systems:
 - Certificate IV v Diploma
- Is injury management core or non-essential?
- Contractor management a core UoC?

WHS working group: 4 New UoC's

UoC	Title
BSBWHS512	Contribute to the management of work-related psychological health and safety
BSBWHS306	Participate in the identification and control of hazardous materials and substances
BSBWHS421	Identify, assess and control hazardous materials and substances
BSBWHS11	Manage hazardous materials and substances

The (new) WHS Act: Safety specialists

Other reforms

- Include a specific duty of care on the providers of workplace health and safety advice, services or products

For consideration by the Minister.

The impacts on the safety profession could be profound:

- Are your safety personnel aware of this change?
- Where are you getting your WHS advice from?
- Are you satisfied that those who provide WHS advice to you are competent?

Verification of competency

- What is it?
 - Employers and Registered Managers have a duty to ensure employees conducting work (especially for high risk work licences) are **competent**.
- What is a competent person?
 - Person who is appointed or designated by the employer to perform specified duties which the person is qualified to perform by:
 - Knowledge
 - Training
 - Experience

Verification of competency

VOC should be evidence based and verified before work commences

- How is it done?
 - Recognition of prior learning (RPL)
 - On-site recognition of current competency (RCC)
 - Site training and development program.

89

Department of Mines, Industry Regulation and Safety | www.dmirns.wa.gov.au

A reminder...

MSIR 4:13 (1) (b)

4.13. Induction and training of employees

- (1) Each responsible person at a mine must ensure that every employee is:
- a. assessed before commencing work at the mine to ensure that the employee is competent to perform the tasks he or she will be assigned and to operate any plant and equipment the employee will be required to operate.

90

Department of Mines, Industry Regulation and Safety | www.dmirns.wa.gov.au

The way forward?

- Can the VOC process be made more effective due to technological advancements?
 - E.g. electronic log books
- Transferability: inter-company "licence to operate".

91

Department of Mines, Industry Regulation and Safety | www.dmirns.wa.gov.au

Conclusion

- National competencies are currently under review, to make them fit-for-purpose, and to meet the needs to both participants and industry
- DMIRS are active participants in the MDCI IRCs to help drive for best outcomes.
- WHS Project: ...
- VOCs: are you satisfied that your site is meeting the intent of MSIR 4:13 (1) (b)?
