Introduction

When placard loads of dangerous goods are transported by road, certain personal protective equipment (PPE) and other safety equipment are required by the Dangerous Goods Safety (Road and Rail Transport of Non-explosives) Regulations 2007 and the seventh edition of the *Australian Code for the Transport of Dangerous Goods by Road and Rail* (ADG7). This is to ensure that, in the event of an accident or incident, the personnel transporting the dangerous goods:

- have a reasonable degree of protection
- if practicable and safe to do so, can effectively respond to either control the situation or mitigate the effects while waiting for the arrival of emergency services or the approved emergency responder.

This guidance note assists vehicle owners, prime contractors and drivers transporting dangerous goods on Western Australian roads to meet their obligations regarding the provision of safety equipment.

Minimum requirements

Table 1 details the PPE and other safety equipment that must be included on vehicles transporting placard loads of dangerous goods.

Three portable warning devices complying with the latest edition of Australian Standard AS 3790 *Portable warning triangles for motor vehicles* are mandatory on all vehicles carrying placard loads.

Other items may be required depending on the load. For example, appropriate electric torches complying with the latest edition of Australian Standard AS/NZS 60079.11 *Explosive atmospheres – Equipment protection by intrinsic safety* are required for some dangerous goods.

All safety equipment must be stowed in an accessible position in the vehicle except for respiratory protective equipment, which must be carried securely and in an accessible position in the vehicle cabin.

Respiratory protective equipment

Respiratory protection is required when transporting a placard load of Division 2.3, 6.1 or Class 8 dangerous goods that may give rise to harmful vapours, gases or dusts. The minimum requirement is an air supplied short-term breathing apparatus suitable for escape purposes.

*Note: Cartridge Respirators do not meet the requirements of the ADG Code.*

Where the driver also attends to the loading or the transfer of the goods then a Self-Contained Breathing Apparatus with a duration greater than 15 minutes may be required by other legislation.

Fire extinguishers

Fire extinguishers are mandatory on all vehicles carrying placard loads of dangerous goods. As listed in Table 2, the number, type and size of extinguishers required vary with the nature of the load.

Each fire extinguisher must be:

- located so it is readily accessible for use
- on road tank vehicles, located and stowed in accordance with the latest edition of Australian Standard AS 2809.1 *Road tank vehicles for dangerous goods – General requirements for all road tank vehicles.*
Where two or more fire extinguishers are required for the load area of a vehicle, one should be located on the left (near) side towards the rear of the vehicle and, wherever practicable, another should be mounted on the right (off) side towards the front of the vehicle.

Except in the case of a combination vehicle, where only one fire extinguisher is required for a vehicle, it should be located, where practicable:

- on the discharge side of a road tank vehicle
- or
- in the cabin for all other vehicles.

Fire extinguishers should be maintained in accordance with the latest edition of Australian Standard AS 1851:2005 *Maintenance of fire protection systems and equipment*. The standard nominates regular inspections at six monthly, yearly and five yearly intervals.

**Other equipment**

Although not specified in the regulations or ADG7, a shovel or spade is recommended where it may be useful for cleaning up or emergency bunding of a spill.

*Note: For flammable dangerous goods, the potential for spark generation must be considered when choosing an appropriate tool.*

Notes:

* A gas detector suitable for the detection of LP gas must be carried on a vehicle transporting unodourised LP gas

** The minimum requirement is air-supplied short-term breathing apparatus suitable for escape purposes, except when, even in an emergency, the dangerous goods will not give rise to harmful vapours, gases or dust. When a driver attends to the loading or transfer of goods, SCBA with a duration of longer than 15 minutes may be required by other legislation (e.g. occupational safety and health)

*** Yes if the goods are elevated temperature substances or dry ice

</tbody>
</table>

**Notes:**
- **Note 1:** In this table “flammable goods” means dangerous goods of Division 2.1, Class 3 or Class 4, or having a subsidiary risk of 2.1, 3 or 4.
- **Note 2:** In cases of combination vehicles, these directions apply to every separate trailer transporting a placard load.
- **Note 3:** If Table 2 requires that a fire extinguisher be located in the cabin, as an alternative to being located in the cabin the fire extinguisher may be located directly behind the cabin or may be mounted on the rear of the cabin.
