Disclaimer

The information contained in this publication is provided in good faith and believed to be reliable and accurate at the time of publication. However, the information is provided on the basis that the reader will be solely responsible for assessing the information and its veracity and usefulness.

The State shall in no way be liable, in negligence or howsoever, for any loss sustained or incurred by anyone relying on the information, even if such information is or turns out to be wrong, incomplete, out-of-date or misleading.

In this disclaimer:

State means the State of Western Australia and includes every Minister, agent, agency, department, statutory body corporate and instrumentality thereof and each employee or agent of any of them.

Information includes information, data, representations, advice, statements and opinions, expressly or implied set out in this publication.

Loss includes loss, damage, liability, cost, expense, illness and injury (including death).

Design, installation and operation of underground petroleum storage systems

This code of practice is a prescribed document under regulation 62 of the Dangerous Goods Safety (Storage and Handling of Non-explosives) Regulations 2007.

Regulation 62 requires all operators of sites that store or handle petroleum products in an underground storage or handling system to comply with this code.

The requirements of Australian Standard AS 4897:2008 *The design, installation and operation of underground petroleum storage systems* apply to all underground storage or handling installations in Western Australia installed or replaced after 1 March 2008, except that all new or replacement installations must meet Equipment Level 1 specifications, regardless of the site classification.
