Guidelines for Reporting

The purpose of the guidelines, in accordance with Section 115A of the Mining Act 1978, (the Act), is to specify the contents, standards, and the formats required in the preparation and submission of mineral exploration reports.

The related documents contained on this page outline the statutory requirements for the submission of data.

To download a copy of the Guidelines for Mineral Exploration Reports on Mining Tenements [click here](#).

The MRT application (MRT software) is a tool for adding required header data (metadata) to exploration data to make it compliant with the requirements of the Guidelines.

To download the Mineral Exploration Reporting Software [click here](#).

Examples of how exploration data should be organised before using the MRT software to add the metadata headers and blank templates for use in organising the data are also available.

To download examples and blank templates of the recommended format for raw data files [click here](#).

Demonstration sessions of the updated MRT software can be arranged by contacting ann.fitton@dmp.wa.gov.au or 08 92223840.

LATEST VERSION MRT SOFTWARE
DECEMBER 2011

now available for download

This version can be used nationally by selecting your State.
