

Neotectonic fault scarps of the southwest Yilgarn

by

RE Murdie

Abstract

The Neotectonic fault scarps map (Fig. 1) of the southwest Yilgarn is extracted from the Geoscience Australia database [Neotectonic scarps layer](#). It comprises fault scarps which are believed to relate to large earthquakes during the Neotectonic era, i.e. the past 5–10 million years.

How to access

The data layer is best accessed using [GeoVIEW.WA](#). This online interactive mapping system allows data to be viewed and searched together with other datasets, including Geological Survey of Western Australia and Geoscience Australia geochronology data, geological maps and mineral exploration datasets. The **Neotectonic fault scarps of the Southwest Yilgarn** data layer is also available as a free download from the [Data and Software Centre](#) via **Datasets – Statewide spatial datasets – Geology – Neotectonic fault scarps**, as ESRI shapefiles and MapInfo TAB files.
