*Refer to the latest ACGIH TLVs and BEIs for current BEIs and recommended sampling time.

** In the absence of ACGIH published BEIs, a site-specific GV may be assigned, that is based on a site-specific health risk assessment. In such cases increasing concentrations of metals in biological media, may be used to assess exposure management effectiveness. In the absence of extensive epidemiology, a GV would not provide reliable information on risk of disease development.

*** If the total arsenic concentration exceeds 35 µg As/L it is necessary to carry out further analytical testing to determine the exposure to inorganic arsenic from mining, to differentiate from less hazardous dietary sources of organic arsenic.

8 Personal protective equipment references

The following table lists hearing protectors and provides information on class rating and expected attenuation, based on specifications outlined in Australian Standard AS 1269.3 *Occupational noise management – Part 3 Hearing protector program*.

What PPE was being correctly worn? Refer to AS 1269.3		
Type	Class rating	Expected attenuation SLC80 range
None worn	No further information	0
Ear plugs Ear muffs	1	10 to 13
	2	14 to 17
	3	18 to 21
	4	22 to 25
	5	26 or greater
Double protection	Class with highest attenuation	+ 5dB

The following table lists commonly used respiratory protective equipment and provides guidance on applicable protection factor and class rating, based on information outlined in Australian Standard AS 1715 *Selection, use and maintenance of respiratory protective equipment*. Consult packages or your supplier for information specific to the respiratory equipment provided to employees.

Respiratory protective equipment – mechanically/thermally generated particulates

Refer AS 1715

Protection factor	Type	Filter type	Class rating
Up to 10	Half-face – replaceable filter	P1	1
		P2	2
		P3	3

11 Conversion of gas measurements

The conversion equations of mg/m³ to ppm is based on 25°C and 1 atmosphere.

Conversion formula for ppm to mg/m³

$$Y \text{ mg/m}^3 = (X \text{ ppm})(\text{molecular weight}) / 24.45$$
